

PittMeadows Plumbing

Website Changes

Landing Page

- Initial landing screen with larger logo at top before main header slides down (image provided)
- Red arrows Larger on Slideshows
- News Slider - more space under title & add the red bar
- Links for news articles go to specific article page (currently going to full article page)
- Padding/margin above slider titles too much - make consistent to other titles
- Buttons all same size - our work button too big
 - Logos at bottom - equal spacing between and all on same horizontal axis
- We Say We Mean We Do, sticks to page top - on header once you scroll unto it

What we Do Page

- Refer to new layout for innovation
- “Subtitles” under section titles bigger and bolder
- Red Underline under titles

Team Page

- equal spacing always between team images (responsive treatments especially for smaller screens around 13”)
- Team pic rollover states flicker, because I'm using two separate images (separate image for rollover state) - could we get a similar effect by using CSS?
- next profile buttons at sides removed and one button placed underneath bio info

Projects Page

- no headers images above projects page (except first project page - only after when you pick a category the landing image at the top will be removed)
- next profile buttons - round like news sliders
- pagination dots moved to top of image
- next project - at top left - aligned right

News Page

- Same language for navigation on news articles + projects + teams

Contact Page

- header image moved up, so you can see full pitt meadows
